

Lineman Auto-Update Template - Quick Start

1) Extract ZIP to \$HOME (Termux):

```
unzip /sdcard/Download/lineman-auto-update-template.zip -d ~/
```

2) First push:

```
chmod +x ~/lineman-auto-update-template/scripts/one_click_push.sh
```

```
~/lineman-auto-update-template/scripts/one_click_push.sh errortoken lineman-auto-update-template
```

3) Bump version & auto release:

```
chmod +x ~/lineman-auto-update-template/scripts/set_version_and_push.sh
```

```
~/lineman-auto-update-template/scripts/set_version_and_push.sh
```

- Enter versionCode (e.g. 2) and versionName (e.g. 2.0)

- Workflow creates Release tag v<versionCode> and uploads APK

4) App will check latest Release on launch and prompt to install update.

Notes:

- Change start URL in app/src/main/res/values/strings.xml

- Uses auto keystore by default; set secrets to use real keystore if needed.
